IT'S NOT JUST DATA, IT'S YOUR BUSINESS

Dell EMC Isilon scale-out storage solutions are designed for enterprises that want to manage their data, not their storage. Our storage systems are powerful yet simple to install, manage, and scale to virtually any size. The storage includes a choice of all-flash, hybrid or archive nodes to meet the most demanding business needs. And, unlike traditional enterprise storage, these solutions stay simple no matter how much storage capacity is added, how much performance is required, or how business needs change in the future. We're challenging enterprises to think differently about their storage, because when they do, they'll recognize there's a better, simpler way—with Isilon.

STORE IT...SIMPLY

With Isilon scale-out network-attached storage (NAS), driven by the OneFS operating system, you can eliminate storage silos, consolidate all your unstructured data and store petabytes of file data in a single data lake.

EXPAND IT...SIMPLY

You can have massive room for growth with a choice of all-flash, hybrid, or archive storage platforms. Go ahead. Take on more projects, perform more in-depth research, and serve up more data. You can scale both capacity and performance in about a minute to meet your specific business needs—all without any additional IT burden. Your cluster can scale up to 252 nodes

ACCELERATE IT...SIMPLY

We provide you with the storage and data management tools to dramatically increase workflow productivity and accelerate your enterprise file applications—allowing you to accelerate your business through faster time to money and new revenue opportunities.

ANALYZE IT...SIMPLY

With native HDFS support and seamless integration with leading Hadoop vendors, we provide a scalable and powerful platform to unlock your data capital, extract business value and gain a competitive edge. Accelerate solutions and workloads like ADAS, AI, ML and DL.

PROTECT IT...SIMPLY

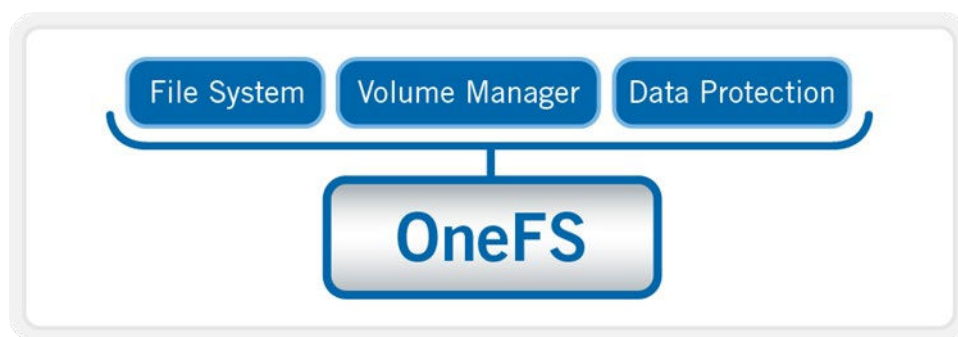

You don't entrust your most valuable assets to just anyone. Our storage solutions provide the high levels of reliability, availability, and serviceability in the industry. For fast and efficient data backup and recovery, you can schedule snapshots as frequently as needed to meet your specific recovery-point objectives. For reliable disaster recovery protection, our storage solutions provide extremely fast data replication, along with push-button simple failover and failback to further increase the availability of your data for mission-critical applications.

SECURE IT...SIMPLY

Meeting compliance and governance requirements is essential for most organizations today. To address these needs, we provide robust security options, including file system auditing and Data at Rest Encryption (DARE) with self-encrypting drives (SEDs). We offer write once, read many (WORM) data protection to prevent accidental or malicious alteration or deletion and help you meet regulatory requirements—including the stringent SEC 17a-4 rule. You can also leverage role-based access control (RBAC) options and, if needed, create isolated storage pools for specific departments within your organization. We offer SMB3 encryption, HDFS Transparent Data Encryption (TDE), Security and Technical Implementation Guide (STIG) hardening, CAC/PIV Smartcard authentication, multi-factor authentication and FIPS OpenSSL support for Federal government agencies and financial services businesses.

OneFS Operating System Powers Isilon Scale-Out Storage Solutions

The OneFS operating system provides the intelligence behind the storage solution. Through the fusion of OneFS, state-of-the-art engineering, and industry-standard enterprise hardware, we provide a highly scalable, high-performance modular storage architecture that can grow with your business. OneFS can help you accelerate processes and workflows, while scaling easily to handle massive growth and providing the highest levels of data protection available. This is all provided in a storage solution designed for unmatched ease of use.

Our scale-out storage solutions, powered by the OneFS operating system, provide users with a broad range of options to meet their specific storage needs.

SCALE-OUT DATA LAKE

As the volume and sources of data have expanded dramatically, traditional techniques to store and analyze information are too expensive and too slow to handle the massive data volumes modern enterprises produce and manage. You can gain a highly flexible and efficient storage infrastructure that expands your data lake from the edge to the core to the cloud. You can consolidate data, simplify management and eliminate inefficient storage silos while supporting a wide range of traditional and next-generation workloads and applications that previously used a number of different types of storage.

Unmatched Agility and Performance

Change is inevitable. That's why every system is built to rapidly and simply adapt. OneFS allows a storage system to grow symmetrically or independently as more space or processing power is required. This allows you to scale your storage easily up to 252 nodes as your business needs dictate. You can scale performance from 250,000 file operations per second (IOPS) with a single chassis up to 15.8 million IOPS with a single cluster. You can also scale throughput from 15 gigabytes per second (GB/s) with a single chassis up to 945 GB/s of aggregate read throughput in a single cluster.

Efficiency and Cost Savings

Orchestrated by OneFS, all components in a cluster work in concert to create a unified pool of highly efficient storage—with a storage utilization rate of up to 80 percent. With SmartDedupe data deduplication, you can further reduce your data storage requirements by up to 35 percent in environments with redundant data across multiple sources. The F810 all-flash platform also delivers up to 3:1 data reduction with features like inline compression and deduplication to dramatically increase the effective storage capacity and density of your storage solution. The unmatched efficiency of the storage systems means that less physical storage and space is required to house the same amount of data—reducing both initial capital outlay and ongoing costs. And, with the OneFS AutoBalance function, you can quickly and easily add nodes without downtime, manual data migration, or application logic reconfiguration, saving precious IT resources. And because the storage is so easy to manage, it requires fewer IT resources for storage administration than traditional storage systems, which further reduces overall operating costs. Using CloudPools software you can lower costs by tiering cold or frozen data to a choice of public or private cloud options.

Simple Interoperability

You can streamline your storage infrastructure by consolidating large-scale unstructured data assets thus eliminating silos of storage. OneFS powered solutions include integrated support for a wide range of industry-standard protocols, including Internet Protocols IPv4, and IPv6, NFS, SMB, HTTP, FTP and HDFS. As a result, you can simplify workflows, accelerate business analytics projects, support cloud infrastructure initiatives, unlock data capital and get more value from your enterprise applications and data.

Enterprise Data Protection and Management Software

Massive stores of data present unique management challenges including disaster recovery, quota management and offsite replication. The data protection and management software provides you with powerful tools that help you protect your data assets, control costs and optimize the storage resources and system performance of your big data environment.
