

EMC Symmetrix V-Max Storage System

The Virtual Matrix Architecture™ is a new way to build storage systems that transcends the physical constraints of all existing architectures by scaling system resources through common building blocks called V-Max™ Engines.

A single V-Max Engine provides the complete foundation for a high-availability EMC® Symmetrix® V-Max system. Each V-Max Engine contains two Symmetrix V-Max directors and redundant interfaces to the Virtual Matrix™ interconnect. Each Symmetrix V-Max director consolidates front-end, global memory, and back-end functions, enabling direct memory access to data for optimized I/O operations.

V-Max Engines are interconnected via a set of multiple active fabrics that provide scalable performance and high availability. V-Max Engines can be added non-disruptively to provide linear scale-out of Symmetrix system resources. The Virtual Matrix is architected to scale to dozens of engines, geographically dispersed throughout a data center, delivering unprecedented scale of infrastructure services under a single point of management.

V-Max Engine maximum specifications

- 4 Quad-core 2.33 GHz Intel® Xeon® processors
- Up to 128 GB of memory
- · Virtual Matrix bandwidth: 24 GB/s

V-Max maximum system specifications

- 8 V-Max Engines
- 1 TB of memory
- Virtual Matrix bandwidth: 192 GB/s

V-Max interconnect

 Industry-standard RapidIO® fabric (Virtual Matrix Architecture is extensible to other standard interconnects.)

Connectivity

Symmetrix V-Max is available in configurations supporting up to eight V-Max engines with a maximum of 128 front-end ports. Optimized hardware logic and data protection encoding ensures end-to-end data integrity with automated channel failover for maximum availability and load balancing. Symmetrix V-Max systems support all popular hardware and operating system platforms, storage area networks (SANs), and high-availability cluster environments. IPv6, IPsec, and compression support are available with GigE ports.

Protocol Usable System Ports

4 Gb/s Fibre Channel Host/SAN Ports4–128 per array, 4–16 ports per V-Max engine4 Gb/s Fibre Channel Remote Replication Ports2–32 per array, 2–4 ports per V-Max engine4 Gb/s FICON Host Ports4–64 per array, 4–8 ports per V-Max engine1 Gb/s GigE Remote Replication Ports2–32 ports per array, 2–4 ports per V-Max engine1 Gb/s iSCSI Ports4–64 per array, 4–8 ports per V-Max engine

Mixed combinations of the above port types depend upon the configuration. Refer to the EMC Support Matrix at www.EMC.com or contact your local EMC sales representative for specific configuration support.

EMC Symmetrix V-Max systems are available in two- to 11-bay configurations for up to two petabytes of usable storage capacity in a single system. With incremental tiered storage capability for maximum TCO value, Symmetrix V-Max arrays are the highest capacity, fastest, most-scalable, most-capable storage systems available and serve as the foundation of today's most-demanding intelligent information infrastructures.

Disk Drive and Flash Drive Connectivity

The Symmetrix V-Max drive infrastructure is architected with the latest 4 Gb/s dual-ported Fibre Channel drives, Enterprise Flash drives, and SATA drives, each supported by two independent I/O channels with automatic failover and fault isolation.

| Available Disk Drives | | | | | |
|---------------------------------|------------|------------|------------|------------|-------------|
| Capacity | 146 GB | 300 GB | 400 GB | 450 GB | 1 TB |
